I'm sure we can have a crew allocated to that work on Friday. I'll contact my dispatcher to confirm.

Bob, I floated an idea to Aaron and Harvey about using the rain water in the tank farm and the containment area itself. I am willing to entertain high tech to low tech ideas. But I would like to be on the ground doing it on Fri. If you get the plan to me eob tomorrow and I commit to getting the comments turned around quickly, is Friday doable? Please let me know. Thanks

Dan -

I'm sorry that there was a delay in contacting me in regards to the development of a revised work plan.

I will be back in the office tomorrow early afternoon, and can have the revised plan to you by close of business. If this needs to happen more quickly, I can press others into service - let me know if that will be necessary.

Regards,

Bob Ransdell

Bob, I really wish we could have had the discussion earlier today when I informed Aaron (your designated lead) of my decision. Aaron might of had the decision earlier if he and Harvey hadn't left the site before touching base with my contractors. Instead I needed to contact him en route and explain that I wanted a plan to review and then contact him again by email three and a half hours later to find out the status: no plan had been initiated nor had you been contacted. Please let me know if and when I can expect a plan to review.

I'm cc'ing my attorney on this development and I will be forwarding you a copy of the Unilateral Administrative Order which spells out my authority at the site now. Please advise the property owners of your willingness to comply with my direction. Thank you and good evening.

Dan -

I got word that the results of today's piping assessment have you considering having the demolished piping re-cleaned. I can prepare a plan to do that work, but before I do I would really like to discuss the results and understand the thinking on re-cleaning.

When you have a moment I would appreciate a call. I'm out of town tonight but will be back in the office in the afternoon tomorrow.

Regards,

Bob Ransdell
